# VELOX'S COMPLETE SUITE

Velox's ScanPlus® ATM service management suite includes a range of features including ATM Monitoring, Preventive Maintenance, Electronic Journal, and many more. Management and monitoring of ATMs are verticals for which ScanPlus® software is well equipped. As providers of remotely operated ATM technology, management, and monitoring software, solutions are designed to offer automated update services and remote diagnostics. ScanPlus® software solutions are hardware-independent, which allows them to run on various hardware platforms from different vendors. This is essential when large institutions merge and need to create a single, cohesive self-service network. Our real-time ATM Monitoring Solution can gather data from different sources such as Switch, & Electronic Journal, and can be customized to meet your organizations monitoring requirements.

- War-room **monitoring** in a single dashboard. Velox's help desk can identify and fix all issues at one glance
- **Auto alert** SMS or Email to the Admin, if the data is not flowing from the Switch
- **Pareto charts**, for all data analysis
- **Data** can be dragged and dropped to see the impact
- **Dashboard** available as an App, which pulls data from the server in real-time
- Enables customers to check the **online status** of the tickets
- Mobile Dashboard is available for the customers to view the **summary** at a glance
- **Real data** is available 24/7 for the customers to view anytime
- **Proactive** security and **convenient** data management
- **Flexibility** and **advanced** Functionality
- **Reduced** costs
- Quick time to **market**
